Foodpanda Data Analysis Project

Project Title: Business Intelligence & Customer Insights Analysis – Foodpanda Dataset

Project Background:
You have been provided with a real-world Foodpanda food delivery dataset. This dataset contains transactional, customer, restaurant, and service performance data across multiple cities in Pakistan.

As a Data Analyst, your role is to transform raw data into meaningful business insights that can guide strategic decisions. This project is designed to test your ability to:

- Clean and model data
- Create meaningful measures and KPIs
- Build professional dashboards
- Extract insights from data
- Communicate findings clearly

Your final deliverable should demonstrate both technical skills and business understanding.

Dataset Overview

Customer Information:
- Customer ID
- Gender
- Age
- City
- Signup Date

Order Details:
- Order ID
- Order Date
- Restaurant Name
- Dish Name
- Food Category
- Quantity
- Price

Customer Engagement & Loyalty:
- Order Frequency
- Last Order Date
- Loyalty Points
- Churn Status

Service & Satisfaction Metrics:
- Rating
- Delivery Status (Delivered / Cancelled / Delayed)
- Payment Method

Note: Your final submission must include visualizations and analysis that answer the following business questions:

Section 1: Sales & Performance Analysis

1. Who Are Our Best Customers?
- Which age group places the highest number of orders?
- Which city generates the highest revenue?
- Do men or women order more?
- Who contributes more revenue by gender?
- Identify top 10 customers by total spending.

2. What's Selling Well?
- Which restaurant receives the highest number of orders?
- Which restaurant generates the highest revenue?
- What is the most popular food category?
- What is the best-selling dish?
- What is the average order value (AOV)?
- Which payment method is used most frequently?

3. Revenue & Order Trends
- Monthly revenue trend
- Monthly order trend
- Revenue by city
- Revenue by category
- Identify peak sales periods

Section 2: Customer Engagement & Retention Analysis

4. Are Customers Happy?
- What is the overall average rating?
- Distribution of ratings
- Percentage of delivered vs cancelled vs delayed orders

- Do customers with higher ratings order more frequently?

5. Customer Retention & Churn
- What is the churn rate?
- How many active vs churned customers?
- Does churn vary by city?
- Does churn vary by age group?
- Do loyal customers (high loyalty points) churn less?
- Relationship between order frequency and churn

Dashboard Requirements

Page 1 – Revenue & Order Analysis

Minimum visuals required:
- KPI Cards (Total Revenue, Total Orders, Average Order Value, Total Customers)
- Revenue Trend
- Orders Trend
- Revenue by City
- Top Restaurants
- Sales by Category
- Payment Method Distribution

Page 2 – Customer Analysis (Engagement, Loyalty & Satisfaction)

Minimum visuals required:
- Average Rating
- Delivery Status Breakdown
- Churn Rate
- Active vs Churned Customers
- Orders by Age Group
- Gender Comparison
- Loyalty Points Analysis
- Correlation between Rating & Order Frequency

Grading Requirements

- Power BI (.pbix) file
- Class Presentation

Good luck 👌
